Question 1:

a)

$$\text{E.ADD} \ \frac{(\dagger) \qquad (\ddagger) \qquad 0 = 0 \pm 0}{\langle (\texttt{newpair.fst}) + (\texttt{newpair.snd}), \emptyset, \emptyset \rangle \Downarrow_e \langle (0, \emptyset, (1 \mapsto 0, 2 \mapsto 0, 5 \mapsto 0, 6 \mapsto 0) \rangle}$$

$$(\dagger) \equiv \frac{1 \notin \mathrm{dom}(h)(1+1) \notin \mathrm{dom}(h)}{\langle newp, \emptyset, \emptyset \rangle \Downarrow_e \langle \lceil 1 \rceil, \emptyset, (1 \mapsto 0, 2 \mapsto 0) \rangle}$$

$$\langle \mathsf{newpair.fst}, \emptyset, \emptyset \rangle \Downarrow_e \langle 0, \emptyset, (1 \mapsto 0, 2 \mapsto 0) \rangle$$

$$(\ddagger) \equiv \text{E.SND} \ \frac{5 \notin \text{dom}(h)(5+1) \notin \text{dom}(h)}{\langle \text{newpair}, \emptyset, (1 \mapsto 0, 2 \mapsto 0) \rangle \biguplus_e \langle \lceil 5 \rceil, \emptyset, (1 \mapsto 0, 2 \mapsto 0, 5 \mapsto 0, 6 \mapsto 0) \rangle}{\langle \text{newpair.snd}, \emptyset, (1 \mapsto 0, 2 \mapsto 0) \rangle \biguplus_e \langle 0, \emptyset, (1 \mapsto 0, 2 \mapsto 0, 5 \mapsto 0, 6 \mapsto 0) \rangle}$$

b)

The semantics is not deterministic, as there is more than one choice for the value of a in E.NEW. This means one program could choose a value of 1 for a, whereas another could choose 2.

c)

The semantics is not total, as not all expressions will evaluate to an answer. For example, the expression 1.snd is a valid expression, however it requires $\langle 1, s, h \rangle \Downarrow_e \langle \lceil a \rceil, s', h' \rangle$ for some a, which is not possible as according to rule E.NUM, $\langle 1, s, h \rangle \Downarrow_e \langle 1, s, h \rangle$

As mentioned above, it is not the case that, for any value v or state s, $\langle 1.\operatorname{snd}, s, h \rangle \downarrow_e \langle v, s', h' \rangle$.

Question 2:

a)

$$\begin{array}{c} \text{B.TRUE} \ \overline{\langle \text{true}, s, h \rangle \Downarrow_b \langle \text{true}, s, h \rangle} & \text{B.FALSE} \ \overline{\langle \text{false}, s, h \rangle \Downarrow_b \langle \text{false}, s, h \rangle} \\ \text{B.AND.TRUE} \ \overline{\langle B_1, s, h \rangle \Downarrow_b \langle \text{true}, s', h' \rangle} & \langle B_2, s', h' \rangle \Downarrow_b \langle \text{true}, s'', h'' \rangle} \\ \text{B.AND.FALSE} \ \overline{\langle B_1, s, h \rangle \Downarrow_b \langle v_1, s', h' \rangle} & \langle B_2, s', h' \rangle \Downarrow_b \langle v_2, s'', h'' \rangle} & v_1 \neq \text{true} \lor v_2 \neq \text{true} \\ \overline{\langle B_1 \& B_2, s, h \rangle \Downarrow_b \langle \text{false}, s'', h'' \rangle}} \\ \text{B.NOT.TRUE} \ \overline{\langle B, s, h \rangle \Downarrow_b \langle \text{false}, s', h' \rangle} \\ \text{B.NOT.FALSE} \ \overline{\langle B, s, h \rangle \Downarrow_b \langle \text{true}, s', h' \rangle} \\ \text{B.NOT.FALSE} \ \overline{\langle B, s, h \rangle \Downarrow_b \langle \text{true}, s', h' \rangle} \\ \text{B.NOT.FALSE} \ \overline{\langle B, s, h \rangle \Downarrow_b \langle \text{true}, s', h' \rangle} \\ \text{B.NOT.FALSE} \ \overline{\langle B, s, h \rangle \Downarrow_b \langle \text{true}, s', h' \rangle} \\ \text{B.NOT.FALSE} \ \overline{\langle B, s, h \rangle \Downarrow_b \langle \text{false}, s', h' \rangle} \\ \text{B.NOT.FALSE} \ \overline{\langle B, s, h \rangle \Downarrow_b \langle \text{false}, s', h' \rangle} \\ \text{B.NOT.FALSE} \ \overline{\langle B, s, h \rangle \Downarrow_b \langle \text{false}, s', h' \rangle} \\ \text{B.NOT.FALSE} \ \overline{\langle B, s, h \rangle \Downarrow_b \langle \text{false}, s', h' \rangle} \\ \text{B.NOT.FALSE} \ \overline{\langle B, s, h \rangle \Downarrow_b \langle \text{false}, s', h' \rangle} \\ \text{B.NOT.FALSE} \ \overline{\langle B, s, h \rangle \Downarrow_b \langle \text{false}, s', h' \rangle} \\ \text{B.NOT.FALSE} \ \overline{\langle B, s, h \rangle \Downarrow_b \langle \text{false}, s', h' \rangle} \\ \text{B.NOT.FALSE} \ \overline{\langle B, s, h \rangle \Downarrow_b \langle \text{false}, s', h' \rangle} \\ \text{B.NOT.FALSE} \ \overline{\langle B, s, h \rangle \Downarrow_b \langle \text{false}, s', h' \rangle} \\ \text{B.NOT.FALSE} \ \overline{\langle B, s, h \rangle \Downarrow_b \langle \text{false}, s', h' \rangle} \\ \text{B.NOT.FALSE} \ \overline{\langle B, s, h \rangle \Downarrow_b \langle \text{false}, s', h' \rangle} \\ \text{B.NOT.FALSE} \ \overline{\langle B, s, h \rangle \Downarrow_b \langle \text{false}, s', h' \rangle} \\ \text{B.NOT.FALSE} \ \overline{\langle B, s, h \rangle \Downarrow_b \langle \text{false}, s', h' \rangle} \\ \text{B.NOT.FALSE} \ \overline{\langle B, s, h \rangle \Downarrow_b \langle \text{false}, s', h' \rangle} \\ \text{B.NOT.FALSE} \ \overline{\langle B, s, h \rangle \Downarrow_b \langle \text{false}, s', h' \rangle} \\ \text{B.NOT.FALSE} \ \overline{\langle B, s, h \rangle \Downarrow_b \langle \text{false}, s', h' \rangle} \\ \text{B.NOT.FALSE} \ \overline{\langle B, s, h \rangle \Downarrow_b \langle \text{false}, s', h' \rangle}}$$

b) The expression newpair could
